

# SPACER DOME PRO

A better engineered face mask

## DESIGN

The [Spacer Dome Pro](#) mask is patterned after N95 medical masks to create an air space with two benefits that set it apart from typical everyday cloth masks:

- The fabric stays away from the wearer's lips for greater comfort
- It allows the wearer to **speak clearly** and **breathe easily**

The combination of a 3-dimensional spacer fabric and a tightly knit liner provides **4 layers of particle filtration**, while remaining lightweight and foldable. For added protection, the **integrated pocket** allows the wearer to **insert additional filter media**.

## COMFORT + FIT

The liner fabric is made with micro-denier yarns for enhanced softness and comfort while the behind-the-head strap system is **fully adjustable** for an individual custom fit. A behind-the-ear strap system will also be available.

### MULTI-LAYER PROTECTION

## PERFORMANCE

Each of its [Made in USA](#) component fabrics is an **anti-microbial** textile employing environmentally friendly, zinc-based technology. The outer fabric has a **durable water repellant finish** to stay dry in bad weather and the inner fabric has moisture management capability to provide added comfort. This mask is **washable** and **reusable** and will continue to perform after 50 launderings.

Available in black and white, 500 mask minimum  
Logo printing and custom colors available
